Correction to: Modified valsalva versus standard valsalva for cardioversion of supraventricular tachycardia: systematic review and meta-analysis

Ahmed S. Abdulhamid^{1,3*}, Fahad Almehmadi^{1,2}, Abdullah A. Ghaddaf^{1,3}, Mohammed S. Alomari^{1,3}, Amin Zagzoog^{1,2} and Atif Al-Qubbany^{1,2}

Correction to: International Journal of Arrhythmia (2021) 22:2 https://doi.org/10.1186/s42444-021-00030-2

Following publication of the original article [1], the authors would like to correct a sentence in the first paragraph of the 'Background' section.

The sentence originally read:

A change in the body position immediately after straining release, in the form of assuming a flat body position along with a 45 s passive leg raise (known as the modifed valsalva maneuver (MVM)), showed higher efcacy (> 40%) in terminating SVT in ED [2].

The sentence should read (the change has been highlighted in **bold typeface**):

A change in the body position immediately after straining release, in the form of assuming a flat body position along with a **15 s passive leg raise** (known as the modifed valsalva maneuver (MVM)), showed higher efcacy (>40%) in terminating SVT in ED [2].

The original article has been corrected.

Author details

¹College of Medicine, King Saud Bin Abdulaziz University for Health Sciences, Jeddah, Saudi Arabia. ²King Faisal Cardiac Center, Ministry of National Guard Health Affairs, King Abdullah International Medical Research Center, Jeddah, Saudi Arabia. ³King Abdullah International Medical Research Center, Jeddah, Saudi Arabia.
